

Working in Partnership

SHARED CARE PRESCRIBING GUIDELINE

Azathioprine / Mercaptopurine for Renal Autoimmune Disease

General Shared Care Guideline (SCG) Principles

- Medicines considered suitable for shared care are those which should be initiated by a Specialist, but where prescribing and monitoring responsibility may be transferred to Primary Care. Due to their potential side effects, shared care medicines usually require significant regular monitoring, and regular review by the Specialist is needed to determine whether the medicines should be continued. The best interest, agreement and preferences of the patient should be at the centre of any shared care agreement.
- The transfer of prescribing responsibility from the Specialist to the patient's General Practitioner (GP) or Primary Care prescriber should occur when both parties are in agreement that the patient's condition is stable or predictable, and that the Primary Care prescriber has the relevant knowledge, skills and access to equipment to allow them to monitor treatment as indicated in this shared care prescribing guideline.
- The aim of this guideline is to equip Primary Care prescribers with the information to confidently take on clinical and legal responsibility for prescribing the medication under a shared care agreement within their own level of competence.
- Within the Bedfordshire, Luton and Milton Keynes (BLMK) Integrated Care System (ICS), shared care guidelines are produced and updated through a robust governance process, following consultation with a wide range of key stakeholders. On this basis for BLMK ICS approved shared care guidelines, it is anticipated that Primary Care prescribers, upon individual assessment, will accept shared care for the patient if they felt it was clinically appropriate to do so and seek patient consent.
- If the Primary Care prescriber feels that a request for shared care cannot be accepted, i.e. falls outside of their own level of competence, they should initially seek further information or advice from the clinician who is sharing care responsibilities or from another experienced colleague in line with the [General Medical Council \(GMC\) guidance](#).
- If the Primary Care prescriber is still not satisfied clinically to accept shared care, they should make appropriate arrangements for the patient's continuing care where possible. This may include asking another colleague in their practice to undertake the shared care. In the event that other colleagues in the practice also decline to share care, the Primary Care prescriber could seek assistance and advice from their Primary Care Network (PCN) (e.g. PCN Pharmacist).
- If the decision, after discussion with the PCN, is to decline shared care, the Primary Care prescriber must notify the Specialist clinician of their decision and reason (See appendix 1) to decline as soon as they can and in a timely manner (within a maximum of 14 to 21 days upon receipt of request) in writing and ensure the patient is aware of the change. In this scenario, the prescribing responsibility for the patient remains entirely with the Specialist. This principle also applies where shared care needs to be terminated in primary care e.g. due to lack of patient engagement. It is anticipated that these would be very rare events.
- The requirement for the Primary Care prescriber to send confirmation in writing via letter or approved electronic communication to the Specialist team for acceptance of shared care is NOT mandated.
- Where the hospital or Specialist clinician retains responsibility for monitoring drug therapy and/or making dosage adjustments, the Primary Care prescriber must be informed of any dose changes made as soon

The following organisations contribute to and participate in the BLMK APC – Bedfordshire, Luton and Milton Keynes Integrated Care Board; Bedfordshire Hospitals NHS Foundation Trust; Cambridgeshire Community Services NHS Trust; Central and North West London NHS Foundation Trust; East London NHS Foundation Trust; Milton Keynes University Hospital NHS Foundation Trust.

as possible to avoid medication errors. Similarly, if the Primary Care prescriber makes changes to the patient's medication regimen, the Primary Care prescriber must inform the Specialist in a timely manner. Primary Care prescribers can contact the Specialist team for advice, training and support as required.

- An agreed method of communication of blood test results and results of investigations between the Specialist, the Primary Care prescriber, the Community Pharmacist and the patient should be agreed at the onset of shared care and documented in the patient's notes in both Secondary care and Primary Care. Blood test results can usually be accessed electronically by both Secondary Care and Primary Care prescribers in the majority of cases. For some medications and in certain cases, the patient may elect to have a patient-held monitoring booklet, e.g. those on warfarin and lithium therapy.
- The principles above apply to shared care arrangements that involve the Specialist service sharing care with GPs and/or other Primary Care prescribers, e.g. Community Nursing Services. Where patient care is transferred from one Specialist service or GP practice to another, a new shared care agreement request must be commenced.

Azathioprine / Mercaptopurine for Renal Autoimmune Disease

Introduction and Aims of Shared Care (including a brief overview of the condition being treated for):

Azathioprine is an immunosuppressant pro-drug of mercaptopurine. It is used as standard treatment for various auto-immune conditions, usually when corticosteroid therapy alone has provided inadequate control. If patients cannot tolerate the side effects of azathioprine they may be trialed with mercaptopurine on the advice of a specialist.

This shared care guidance will cover renal autoimmune conditions as listed below:

- Systemic Lupus Erythematosus
- Vasculitis
- Minimal Change Disease
- Membranous Nephropathy
- Focal Segmental Glomerulosclerosis

Transplant and other indications not listed above will not be covered by this SCG.

1. AREAS OF RESPONSIBILITY

Secondary/Tertiary Care Prescribers or Specialist Team

- To obtain patient informed consent for sharing of care between the Specialist, Primary Care prescriber and patient. Consenting parties must have sufficient, accurate, timely information in an understandable form. Consent must be given voluntarily and must be documented in the patient's notes.
- To confirm the working diagnosis.
- To confirm that the patient's condition has a predictable course of progression and the patient's care can be suitably maintained by Primary Care, following their medicine being optimised with satisfactory investigation results for at least 4 weeks.
- If shared care is considered appropriate for the patient, the patient's treatment regimen is confirmed, and benefit from treatment is demonstrated, the Specialist will contact the Primary Care prescriber to initiate shared care.
- At the point of initial contact, the Specialist should check if the Primary Care prescriber can access blood test results electronically. If access is unavailable, the Specialist and the Primary Care prescriber should agree a process of communication to ensure blood test results and relevant results of investigations can be accessed by both parties in a timely manner.
- Following the request to the patient's Primary Care prescriber to initiate shared care; to ensure that the patient has an adequate supply of medication until shared care arrangements are in place. Further prescriptions will be issued if, for unforeseen reasons, arrangements for shared care are not in place by the anticipated start date of the shared care (usually within 28 days or once the patient is stabilised on the medication). Patients should not be put in a position where they are unsure where to obtain supplies of their medication.
- To ensure that the Primary Care prescriber has sufficient information to enable them to monitor treatment, identify medicines interactions, and prescribe safely. This should include access or direction to a current copy of the SCG and contact details for the initiating Specialist. As a partner in the shared care agreement, the patient should, where appropriate, be provided with access or direction to a copy of the shared care guideline.
- The Specialist will provide the patient's Primary Care prescriber with the following information:
 - diagnosis of the patient's condition with the relevant clinical details
 - details of the patient's specialist treatment to date
 - details of treatments to be undertaken by the Primary Care prescriber (including reasons for choice of treatment, medicine or medicine combination, frequency of treatment, number of months of treatment to be given before review by the Specialist)
 - the date from which the Primary Care prescriber should prescribe the treatment
 - details of other specialist treatments being received by the patient that are not included in shared care
 - details of monitoring arrangements required
- Whenever the Specialist sees the patient, he/she will:
 - send a written summary to the patient's Primary Care prescriber in a timely manner, noting details of any relevant blood test results or investigations if applicable
 - confirm that ongoing treatment with the monitored medicine is appropriate
 - record test results on the patient-held monitoring booklet if applicable and if this method of communication has been agreed at the onset of shared care
 - confirm the current dosage and clearly highlight any changes made both to the patient and in writing to the patient's Primary Care prescriber who will action any of them as required
- The Specialist team will:
 - provide training, advice and guidance (as appropriate) for Primary Care prescribers if necessary to support the shared care agreement
 - provide contact details for both working and non-working hours
 - supply details for fast track referral back to secondary/specialist care
 - provide the patient with details of their treatment, follow-up appointments, monitoring requirements and, where appropriate, nurse specialist contact details
 - provide continued support for the Primary Care prescriber and answer any questions they may have on the treatment and the condition for which the medicine is being used
- Prior to transfer of prescribing, the Specialist will:
 - Ensure that patients (and their caregivers, where appropriate) are aware of and understand their

responsibilities to attend appointments and the need for continued monitoring arrangements.

- The Specialist will document the decision to transfer prescribing of the treatment to the Primary Care prescriber via the shared care guideline in the patient's hospital medical notes. If the Primary Care prescriber declines the request for shared care and the Specialist is therefore responsible for the prescribing of the medication for the patient, the Specialist will document this also in the patient's hospital medical notes.

All of the above information should be provided to the Primary Care Prescriber in writing via a letter or approved electronic communication.

Primary Care Prescribers

- To prescribe within their own level of competence. The (GMC) guidance on "Good practice in prescribing and managing medicines and devices" states that doctors are responsible for the prescriptions they sign and their decisions and actions when they supply and administer medicines and devices, or authorise or instruct others to do so. They must be prepared to explain and justify their decisions and actions when prescribing, administering and managing medicines.
- The same principles apply to non-medical prescribers as well as medical prescribers as outlined in the "[Competency Framework for all Prescribers](#)".
- To confirm that the patient or carer consents to sharing of care between the Specialist, Primary Care prescriber and patient. Consenting parties must have sufficient, accurate, timely information in an understandable form. Consent must be given voluntarily and must be documented in the patient's notes.
- If shared care is accepted, commencement of shared care must be clearly documented in the patient's Primary Care medical notes.
- If declining the request for shared care, the decision and rationale should be explained to the Specialist in writing as soon as is possible and in a timely manner, within a maximum of 14 to 21 days upon receipt of request. The patient should also be informed of the decision.
- Ensure that he/she has the information and knowledge to understand the therapeutic issues relating to the patient's clinical condition.
- Undergo any additional training necessary in order to carry out the prescribing and monitoring.
- Agree that in his/her opinion the patient should receive shared care for the diagnosed condition unless good reasons exist for the management to remain within Secondary/Specialist care.
- Prescribe the maintenance therapy in accordance with the written instructions contained within the SCG or other written information provided, and communicate any changes of dosage made in Primary Care to the patient. It is the responsibility of the prescriber making a dose change to communicate this to the patient.
- If it has been agreed that a patient-held monitoring booklet will be used and where applicable, keep the patient-held monitoring record up to date where possible with the results of investigations, changes in dose and alterations in management and take any actions necessary.
- Report any adverse effect in the treatment of the patient to the Specialist team, and via the MHRA Yellow Card Scheme <https://yellowcard.mhra.gov.uk/>.
- The Primary Care prescriber will ensure that the patient is monitored as outlined in the SCG and will take the advice of the referring Specialist if there are any amendments to the suggested monitoring schedule.
- The Primary Care prescriber will ensure a robust monitoring system is in place to ensure that the patient attends the appropriate appointments in Primary Care for follow-up and monitoring, and that defaulters from follow-up are contacted to arrange alternative appointments. It is the Primary Care prescriber's responsibility to decide whether to continue treatment for a patient who does not attend appointments required for follow-up and monitoring, and to inform the Specialist of any action taken.
- Primary Care prescriber are not expected to be asked to participate in a shared care arrangement where:
 - no locally approved SCG exists, or the medicine or condition does not fall within the criteria defining suitability for inclusion in a shared care agreement
 - the prescriber does not feel clinically confident in managing this individual patient's condition, and there is a sound clinical basis for refusing to accept shared care
- Where community nurse involvement is required in the administration of medicines under a SCG, nurses should be provided with adequate information and guidance by the prescriber or the Specialist. Arrangements should be made in good time for any potential problems to be resolved to ensure that patient care is not compromised.
- Ensure no drug interactions with other medicines, including any medicines that may not be listed in the patient's treatment record such as any over-the-counter medicines, herbal remedies and recreational drugs. Refer to section 3 for additional information.

The following organisations contribute to and participate in the BLMK APC – Bedfordshire, Luton and Milton Keynes Integrated Care Board; Bedfordshire Hospitals NHS Foundation Trust; Cambridgeshire Community Services NHS Trust; Central and North West London NHS Foundation Trust; East London NHS Foundation Trust; Milton Keynes University Hospital NHS Foundation Trust.

- Administer inactivated influenza vaccine and other recommended seasonal vaccines (e.g. COVID) annually unless otherwise advised by the initiating specialist
- Check patient has had ONE dose of pneumococcal vaccine (revaccination is not recommended except every 5 years in patients whose antibody levels are likely to have declined more rapidly e.g. due to asplenia), see BNF or Green Book
- COVID-19 vaccination is safe and recommended
- For susceptible immunosuppressed individuals with significant exposure to chicken pox (varicella) or shingles (Zoster), follow latest national guidance on post exposure prophylaxis and use on anti-virals and varicella zoster immunoglobulin (VZIG)
- Ask about oral ulceration, sore throat, unexplained rash or unusual bruising/bleeding at every consultation
- Organisation of urgent referral to the specialist team or A+E if severe side effects or potential overdose is apparent
- Liaise with specialist team if the medication becomes less effective and/or the patient complains of symptoms

Patient and/or carer

- To provide their informed consent for sharing of their care with the Specialist and Primary Care prescriber. Consenting parties must have sufficient, accurate, timely information in an understandable and accessible format. Consent must be given voluntarily and must be documented in the patient's notes. Supporting information is available from NICE "[Making decisions about your care](#)".
- To take their medication as agreed, unless otherwise instructed by an appropriate healthcare professional.
- To meet all necessary monitoring arrangements to ensure the safe prescribing of their medication, and to alert the prescriber where these arrangements are not met.
- To attend all follow-up appointments with the Primary Care prescriber and Specialist. If the patient is unable to attend any appointments, they should inform the relevant practitioner as soon as possible and arrange an alternative appointment.
- Inform healthcare professionals of their current medications (both prescribed and non-prescribed where applicable) prior to receiving any new prescribed or over-the-counter medication.
- Report all suspected adverse reactions to medicines to their Primary Care prescriber.
- Store their medication securely away from children and according to the medication instructions.
- Read the information supplied by their Primary Care prescriber, Specialist and Pharmacist and contact the relevant practitioner if they do not understand any of the information given.
- An agreed method of communication of results of investigations between the Specialist, the Primary Care prescriber, the Community Pharmacist and the patient should be agreed at the onset of therapy.
- If it has been agreed to use a patient-held monitoring booklet, the patient needs to arrange for the monitoring booklet to be kept up to date.

Community Pharmacist

- Know where to access locally agreed shared care guidelines to aid professional clinical check of prescription prior to dispensing.
- Professionally check prescriptions to ensure they are safe for the patient and contact the Primary Care prescriber if necessary to clarify their intentions. It is good practice to check the patient-held record book if applicable to ensure the correct dose is dispensed*.
* An agreed method of communication of results of investigations between the Specialist, the Primary Care prescriber, the Community Pharmacist and the patient should be agreed at the onset of therapy.
- Fulfil legal prescriptions for medication for the patient unless they are considered unsafe.
- Counsel the patient on the proper use of their medication.
- Advise patients suspected of experiencing an adverse reaction to their medicines to contact their Primary Care prescriber or Specialist/Specialist nurse team.

2. COMMUNICATION AND SUPPORT

<p>Hospital / Specialist contact information <i>(The referral letter will indicate named consultant)</i></p> <p>Hospital name and address: Luton and Dunstable Hospital, Bedfordshire Hospitals NHS Foundation Trust</p> <p>Consultant names: Dr Miriam Ball</p> <p>Role and specialty: Consultant Nephrologist</p> <p>Tel number: 01582 718840</p> <p>Email address: ldh-tr.nephrology@nhs.net</p>	<p>Out-of-hours contact details & procedures:</p> <p>Contact on call Medical Registrar via switchboard on 01582 49116</p>
<p>Specialist support / resources available to Primary Care prescriber including patient information:</p> <p>This shared care guideline is available online on the BLMK Medicines website https://medicines.bedfordshirelutonandmiltonkeynes.icb.nhs.uk/ and search shared care guidance. Any dosage adjustments made by the hospital specialist team will be recorded in the electronic medical notes and full details sent to the GP. Blood test results taken by the specialist hospital team will be available on the electronic system, the hospital specialist team will then send a paper copy of the blood test results to the GP in a timely manner. GPs should contact the hospital specialist team if any dose adjustments are required or if the need to discontinue the medication arises. The dosage regime and frequency of blood test monitoring should be clearly explained to the patient. Trust produced patient information leaflets will also be provided to the patient.</p>	

3. CLINICAL INFORMATION

<p>Indication(s): (Please state whether licensed or unlicensed)</p>	<p>Licensed indications for azathioprine for use in this SCG include: Systemic Lupus Erythematosus (SLE)</p> <p>Other off-label indications include, but not limited to immune-related nephritis, systemic vasculitis.</p> <p>Mercaptopurine would be used off-label within this SCG</p>
<p>Place in therapy:</p>	<p>1st line</p>
<p>Therapeutic summary:</p>	<p>Azathioprine is an immunosuppressant pro-drug of mercaptopurine. They are used as standard treatment for various auto-immune conditions, usually when corticosteroid therapy alone has provided inadequate control.</p> <p>If patients cannot tolerate the side effects of azathioprine they may be trialled with mercaptopurine on the advice of a specialist. Therapeutic effect may take weeks to months to show, and can include a steroid sparing effect in which they can reduce the toxicity associated with high dosage and prolonged usage of corticosteroids.</p>
<p>Initiation and ongoing dose regime and Route of administration:</p>	<p><i>Note: Transfer of monitoring and prescribing to Primary Care is normally after the patient's dose has been optimised and with satisfactory</i></p>

The following organisations contribute to and participate in the BLMK APC – Bedfordshire, Luton and Milton Keynes Integrated Care Board; Bedfordshire Hospitals NHS Foundation Trust; Cambridgeshire Community Services NHS Trust; Central and North West London NHS Foundation Trust; East London NHS Foundation Trust; Milton Keynes University Hospital NHS Foundation Trust. 6

	<p><i>investigation results for at least 4 weeks.</i></p> <p><i>All dose or formulation adjustments will be the responsibility of the initiating Specialist unless directions have been discussed and agreed with the Primary Care prescriber. Termination of treatment will be the responsibility of the Specialist.</i></p> <p>Initial stabilisation: (The loading period must be prescribed by the initiating Specialist)</p> <p>Loading doses are determined by the specialist and based on indication and disease severity.</p> <p>Maintenance dose (following initial stabilisation): (The initial maintenance dose must be prescribed by the initiating Specialist)</p> <p>Azathioprine = 0.5-3mg / kg daily, adjusted according to response Mercaptopurine = 1-1.5mg / kg daily, adjusted according to response</p> <p>Some patients may respond to lower doses Note patients may be on more than one DMARD at a time.</p> <p>Conditions requiring dose adjustment: Renal impairment Mild to moderate hepatic impairment Thiopurine methyltransferase (TPMT) deficiency or NUDT15 mutation Therapeutic response Elderly patients</p>																	
<p>Duration of treatment:</p>	<p>Long term as per response</p>																	
<p>Preparations available (Manufacturer):</p>	<p>Azathioprine = Available as 25mg, 50mg tablets. 10mg/ml oral suspension</p> <p>Mercaptopurine (MP) = 10 and 50mg tablets. 20mg/ml oral suspension.</p>																	
<p>Summary of adverse effects: (See Summary of Product Characteristics (SPC) for full details)</p> <p>Any serious adverse reactions should be reported to the MHRA via the Yellow Card scheme.</p>	<table border="1"> <thead> <tr> <th data-bbox="592 1301 815 1361">Adverse effect</th> <th data-bbox="820 1301 1043 1361">Frequency/likelihood</th> <th data-bbox="1048 1301 1477 1361">Management</th> </tr> </thead> <tbody> <tr> <td data-bbox="592 1368 815 1503">GI side effects such as nausea and vomiting,</td> <td data-bbox="820 1368 1043 1503">Very Common</td> <td data-bbox="1048 1368 1477 1503">Review for reversible causes. GI side effects such as nausea and vomiting,	Very Common	Review for reversible causes. Medication can be taken with food to help ease mild symptoms. If they persist contact specialist.																
Hypersensitivity reactions (fevers, rash, rigors, myalgia, arthralgia, hypotension, dizziness etc)	Uncommon	As per SPC immediate withdrawal, and contact specialist																
Flu-like symptoms / myalgia / headaches	Common	If mild, continue treatment at night Moderate to severe – stop drug and contact specialist																
Fever, sore throat, ulceration	Common	Check FBC and stop if WCC low.																

	Abnormal bruising or bleeding	Uncommon	Stop until recovery and check FBC. Do not restart if blood tests are abnormal and contact specialist.	
	Suspected pancreatitis	Common	Withhold treatment, and check amylase levels. Refer to specialist for advice.	
	Alopecia	Uncommon	If mild – reassure and continue. If severe contact specialist and discuss alternative treatments.	
Monitoring requirements by Specialist (baseline investigations, initial monitoring and ongoing monitoring):	<p>Baseline investigations:</p> <ul style="list-style-type: none"> • FBC, LFTs, Albumin, U+E, eGFR, • ESR and CRP • Height and weight • Blood Pressure • Screening for viral infections as per local policy (e.g. HIV, Hepatitis B and C, Varicella etc) • Screening for lung disease, including tuberculosis, should be undertaken at clinician discretion on a case by case basis • Urinalysis • TPMT for suitability for treatment and dose guidance • Confirm cervical screening is up to date • Provide or request appropriate vaccination prior to treatment initiation, according to local arrangements (e.g. pneumococcal, shingles, influenza, COVID-19) <p>Initial monitoring: (<i>Monitoring at baseline and during initiation is the responsibility of the Specialist until the patient is optimised and stabilised on the medicine with no anticipated further changes</i>)</p> <p>To be repeated every 2 weeks until dose has been stable for 6 weeks, then 4-weekly for 12 weeks, thereafter every 12 weeks:</p> <ul style="list-style-type: none"> • FBC • LFTs • Albumin • U+E, eGFR <p>Following a dose increase repeat every 2 weeks until the dose has been stable for 6 weeks, then revert to previous schedule.</p> <p>Ongoing monitoring: Specialist teams to review patients regularly throughout treatment (usually annually unless stated otherwise) and to confirm doses with primary care following review.</p>			
Ongoing monitoring requirements by Primary Care prescriber:	Monitoring	Frequency	Result	Action for Primary Care prescriber
	FBC, LFTs, Albumin, U+E, eGFR,	Every 4 weeks for 12 weeks with hospital undertaking the first 4-week test and primary	If Neutrophils <2.0 x10 ⁹ /L	If <1.6x10 ⁹ /L stop treatment and refer back to specialist If between 1.6-2.0 x10 ⁹ /L discuss with specialist and consider 50% dose reduction

		<p>care to undertake the second and third 4-week test, then to continue every 12 weeks</p>	<p>WCC <3.5x10⁹/L</p> <p>Unexplained eosinophilia > 0.5x10⁹/L Or Platelets <140x10⁹/L</p> <p>Anaemia</p> <p>MCV>105fL</p> <p>AST/ALT > 2 times the upper limit of normal (ULN)</p> <p>If renal impairment develops or there is an unexplained fall in serum albumin</p>	<p>If <3.0 stop and contact specialist If 3.0-3.5 repeat and review dose with specialist if still <3.5 (Note: it is normal to have a low lymphocyte count – discuss with specialist if concerns)</p> <p>Contact specialist for advice. Withhold treatment if no response within 5-7 days.</p> <p>If new – investigate as usual and monitor. If longstanding monitor and contact specialist for concerns</p> <p>Check B12, folate, alcohol history and TFT. If >120fL stop and contact specialist</p> <p>If >3 x ULN hold azathioprine and seek specialist advice. For results between 2 - 3 x ULN, continue azathioprine / MP, repeat bloods and seek specialist advice. Minor elevations of AST/ALT are common.</p> <p>Contact specialist for advice. Withhold azathioprine/MP if no response from specialist in 5-7 days.</p>
--	--	--	---	---

	ESR and CRP	12 weeks	Pancreatitis	Discontinue treatment and contact specialist.
	Ask about oral ulceration, sore throat, unexplained rash or unusual bruising/bleeding.	At every consultation	Rising ESR / CRP	Contact specialist for advice. Check FBC and stop treatment if WCC low (actions as documented above)
<p>Clinically relevant drug interactions and advice on management:</p> <p><i>Note: This does not replace the SPC and should be read in conjunction with it.</i></p>	Drug interaction		Management / Action for Primary Care prescriber	
	Allopurinol		Potential to cause thiopurine toxicity and should be avoided, except with specialist input. The dose of azathioprine or mercaptopurine should be reduced by 75% if used concurrently with allopurinol (i.e. only a quarter of the usual dose of azathioprine/mercaptopurine is given). GP to discuss with the specialist if considering prescribing allopurinol.	
	Febuxostat		Potential to cause thiopurine toxicity; avoid in combination with azathioprine or mercaptopurine.	
	Live vaccines		Increased risk of generalised infection. Consult the Green Book for the most up to date advice.	
	Warfarin		Thiopurines may reduce anticoagulant effects of warfarin – may require an increased dose of warfarin.	
	Co-trimoxazole / trimethoprim		Possible increased risk of haematological toxicity, monitor closely.	
	Clozapine		Avoid due to increased risk of agranulocytosis.	
Ribavirin		Increased risk of haematological toxicity when azathioprine given concurrently, and this combination should be avoided.		

The following organisations contribute to and participate in the BLMK APC – Bedfordshire, Luton 10 and Milton Keynes Integrated Care Board; Bedfordshire Hospitals NHS Foundation Trust; Cambridgeshire Community Services NHS Trust; Central and North West London NHS Foundation Trust; East London NHS Foundation Trust; Milton Keynes University Hospital NHS Foundation Trust.

	<p>Aminosalicylates (sulfasalazine, mesalazine or olsalazine) –</p> <p>The following drugs may be prescribed with caution: ·</p> <p>ACE inhibitors - increase the risk of anaemia and or leukopenia.</p> <p>Cimetidine and indomethacin - concomitant administration of thiopurines may increase the risk of myelosuppression</p>	<p>Increased risk of haematological toxicity with concomitant thiopurine due to TPMT inhibition. Dose adjustment of azathioprine or mercaptopurine and additional monitoring of FBC may be required.</p>
	<p>Please see SPC for comprehensive information.</p>	
<p>Clinically relevant precautions and contraindications:</p> <p><i>Note: This does not replace the SPC and should be read in conjunction with it.</i></p>	<p><u>Cautions/Precautions:</u></p> <p>Infections – it is advised to pause medication whilst there is an active infection as Azathioprine / Mercaptopurine can increase susceptibility to infection. Once the infection has cleared treatment can be resumed. If antibiotic treatment is required specialist advice can be sought to discuss treatment.</p> <p>Live vaccines – should be avoided in patients taking a dose of >3mg/kg/day azathioprine or >1.5mg/kg/day of mercaptopurine. Refer to Green book for up to date advice.</p> <p>History of pancreatitis.</p> <p>Concomitant use of allopurinol – reduce dose of azathioprine/ mercaptopurine by 75%.</p> <p><u>Contraindications:</u></p> <p>Hypersensitivity to azathioprine or mercaptopurine Severe hepatic impairment Absent or very low thiopurine methyltransferase (TPMT) activity – risk of life-threatening pancytopenia.</p> <p>Please see SPC for comprehensive information.</p>	
<p>Renal impairment:</p>	<p>Use lower end of range in patients with renal impairment</p>	
<p>Hepatic impairment:</p>	<p>ALT/AST >3xULN – withhold azathioprine and consult specialist</p>	
<p>Advice to patients and carers:</p> <p><i>The Specialist will counsel the patient with regard to the benefits and risks of treatment and will provide the patient with any relevant information and advice, including patient information leaflets on individual medicines.</i></p>	<p>The patient should be advised to report any of the following signs or symptoms to their Primary Care prescriber without delay:</p> <ul style="list-style-type: none"> • Abdominal pain or jaundice (skin or whites of the eyes appear yellow) • Signs of Pancreatitis (abdominal pain, nausea, vomiting) • Signs and symptoms suggestive of bone marrow suppression e.g. sore throat, oral ulceration, abnormal bruising or bleeding, 	

The following organisations contribute to and participate in the BLMK APC – Bedfordshire, Luton 11 and Milton Keynes Integrated Care Board; Bedfordshire Hospitals NHS Foundation Trust; Cambridgeshire Community Services NHS Trust; Central and North West London NHS Foundation Trust; East London NHS Foundation Trust; Milton Keynes University Hospital NHS Foundation Trust.

	<p>or signs of infection.</p> <ul style="list-style-type: none"> • The patient should be advised during a serious infection (requiring antibiotics) Azathioprine should be temporarily discontinued until the patient has recovered from the infection. • Exposure to chickenpox or shingles or if the patient develops chicken pox or shingles especially if taking >3mg/kg/day of azathioprine or >1.5mg/kg/day mercaptopurine. • Pregnancy or planning to become pregnant for dose adjustments. • To avoid contact with people with chicken pox or shingles and report any such contact urgently to their primary care prescriber. If the patient is exposed, contact the specialist for advice. For detailed advice on risk assessment and post exposure prophylaxis following exposure to chicken pox and shingles see the Green Book • Vaccination in line with current national advice (e.g. for COVID-19, influenza) is safe and recommended. • Inform any prescribers or healthcare professional that they are taking azathioprine or mercaptopurine. • Always ask a pharmacist before purchasing any medicines over the counter, including herbal remedies, and ask if they are safe. • All women aged 25-64 should be encouraged to participate in cervical screening programmes – no need to attend more frequently than recommended. • Patients have a small increased risk of skin cancers so should be advised to wear high factor sunscreen and to wear a hat and protective clothing when in strong sunshine. Sun beds should be avoided. Patients should be advised to carry out regular self-examination of the skin and report if there are any new lesions and/or changes to skin.
<p>Pregnancy, paternal exposure and breastfeeding:</p> <p><i>It is the Specialist's responsibility to provide advice on the need for contraception to male and female patients where applicable on initiation and at each review, but the ongoing responsibility for providing this advice rests with both the Primary Care prescriber and the Specialist.</i></p>	<p><u>Pregnancy:</u> Azathioprine is compatible throughout pregnancy at doses $\leq 2\text{mg/kg/day}$. Current available data do not suggest that mercaptopurine exposure during pregnancy increases the risk of miscarriage, congenital malformation, intrauterine death, foetal growth restriction, or preterm delivery but the data are limited for some outcomes. A careful assessment of risk versus benefit should be made before mercaptopurine is prescribed to patients who are pregnant.</p> <p><u>Breastfeeding:</u> Azathioprine is compatible with breastfeeding, although the active metabolite mercaptopurine is present in breast milk. A risk versus benefit assessment is advised. If used during breastfeeding, monitor for signs of infection or immunosuppression. If high doses of azathioprine are used, monitor infant blood counts. If mercaptopurine is used, monitor infant's blood count and liver function.</p>
<p>Practical issues and Supply of ancillary equipment (where relevant):</p>	<p>The tablets should be swallowed whole and not split / crushed. Can be taken either with or without food. Tablets should be taken at least 1 hour before or 2 hours after milk or dairy products. Taking with or after food may relieve nausea, however the oral absorption of azathioprine or mercaptopurine may be reduced. Consideration should be given to monitoring therapeutic efficacy more closely if patient is taking azathioprine or mercaptopurine consistently with food. For azathioprine or mercaptopurine oral suspension, the bottle should be shaken vigorously for at least 30 seconds to ensure the suspension is well mixed.</p>

<p>This shared care guideline is to be read in conjunction with the following documents:</p> <ul style="list-style-type: none"> • RMOC Shared Care Guidance – link here • NHSE/NHSCC guidance – items which should not be routinely prescribed in Primary Care: guidance for CCGs – link here • NHSE policy – Responsibility for prescribing between Primary & Secondary/Tertiary Care – link here 	

Appendix 1 – Possible Reasons for a Primary Care Prescriber to decline to accept shared care:-

1	I do not feel clinically confident in managing this individual patient's condition, and there is a sound clinical basis for refusing to accept shared care. I have consulted with other Primary Care prescribers in my practice who support my decision. I have discussed my decision with the patient and request that prescribing for this individual remains with you due to the sound clinical basis given above.
2	The medicine or condition does not fall within the criteria defining suitability for inclusion in a shared care arrangement (medicine not included on the national list of shared care drugs as identified by RMOC or is not a locally agreed shared care medicine).
3	The patient has not had the minimum duration of supply of medication to be provided by the initiating Specialist. Therefore, please contact the patient as soon as possible in order to provide them with the appropriate length of supply of the medication before transferring the prescribing responsibility to the Primary Care prescriber.
4	The patient has not been optimised/stabilised on this medication. Therefore, please contact the patient as soon as possible in order to provide them with the medication until the patient is optimised on this medication before transferring the prescribing responsibility to the Primary Care prescriber.
5	Shared Care Guideline and/or relevant clinical information as stipulated in the guideline not received. Therefore, please contact the patient as soon as possible in order to provide them with the medication until I receive the appropriate Shared Care Guideline before transferring the prescribing responsibility.
6	Other (Primary Care prescriber to complete if there are other reasons why shared care cannot be accepted or why shared care is to be discontinued if already started, e.g. adverse effects):
